Shoulder PRP Injections Common Questions Dr. Stetson

Shoulder Platelet Rich Plasma (PRP) Injections

Common Questions

More information can be found on Dr. Stetson's website at www.sportsmedicinedr.com

WHAT IS PLATELET RICH PLASMA (PRP)?

Platelets are cell fragments found in blood that have several roles in your body. Platelets are most commonly known to assist in clotting blood. They also play a role in your body's reparative processes. Platelet rich plasma (PRP) is made up of high concentrations of platelets and growth factors from your own body. When injected into areas of inflammation or tissue damage, PRP can promote healing. An injection of PRP into the shoulder has been shown in recent studies to possibly aid in the healing process of rotator cuff tears after surgery (References 1 and 2). Unfortunately, it has not been shown to be effective in rotator cuff tendinitis or shoulder impingement but further research still needs to be done in these areas.

HOW IS A PRP INJECTION DONE?

A PRP injection can be done at the time of surgery in order to accelerate or aid in the healing process of rotator cuff repairs. At the end of surgery, a simple blood draw is performed and the syringe is placed into a centrifuge and is spun for approximately 5 minutes. This step separates the platelets from the other components of blood that will be discarded. The PRP then is injected under direct arthroscopic vision into the area of the rotator cuff repair.

ADVANTAGES/DISADVANTAGES OF PRP

Recent research studies have shown that PRP used at the time of rotator cuff repair surgery can significantly reduce the rate of retearing and/or incomplete tendon healing after a rotator cuff repair after surgery. Two recent studies (references 1 and 2) have shown a reduction in retear rates of the rotator cuff is PRP is injected at the time of the surgery. We are therefore recommending a PRP injection at the time of surgery for any patient that undergoes an arthroscopic rotator cuff repair.

The disadvantage of this is that PRP is currently not covered by any insurance. If you are interested in having the PRP injection at the time of arthroscopic rotator cuff repair, it must be paid out of your own pocket (cash or credit card) before the surgery.

If you are interested, you can discuss this with Dr. Stetson and his assistant Suzie can provide you with the cost of the procedure. Her email is suzie@stetsonleeortho.com

Shoulder PRP Injections Common Questions Dr. Stetson

WHAT IF I HAVE ANY OTHER QUESTIONS?

If you have any other questions, more information can be found on Dr. Stetson's website at www.sportsmedicinedr.com or just call Dr. Stetson's office and speak to his assistant Suzie, we are always happy to answer any questions you may have.
